Scott's Retirement

Kim's Corner

All good things must come to an end...

"End of life for Windows 7" that is. Microsoft will no longer provide security updates or support for PCs running Windows 7 after January 14, 2020. Therefore all SCADA computers must be updated to Windows 10, which also means you'll need to upgrade iFix software.

Contact TLECC for a quote today!

"Retaining Timber Line's Knowledge Base"...

With the unforeseen retirement of Scott Coulson (below) and the addition of several new staff members, Timber Line has stepped up on training! Rest

assured we are working hard to bring our new Programmer/Technicians up to speed on new and legacy equipment. We have also welcomed the knowledge and experience our new techs bring to expand Timber Line's products and solutions, such as Allen Bradley Factory Talk, and Automation Direct PLC. Timber Line is looking to the future with our customers in mind. With Ethernet based communication systems becoming the industry standard, we have been developing ways for easy migration from the Motorola analog radio systems into Digital Ethernet communication systems. This platform allows you to utilize existing Motorola equipment as well as Allen Bradley equipment on a common telemetry system. What does all this mean to the end user? Faster communications, easier troubleshooting of communication issues, versatility in PLC platforms, more security, and better control. Give us a call and let us help you audit your SCADA/telemetry system and develop a long term plan for your district.

Retirement

Scott Coulson, former Sr. Programmer, has recently retired from Timber Line to recover from an impairment. He is profoundly missed by our staff and our customers. Scott started wiring panels when Timber Line was a very new, small company, and after completing his engineering degree, was hired full time in 1994 as a programmer and field technician. As Timber Line has grown Scott chose to specialize in Motorola Telemetry products and iFix software. He has many customers in Northern Colorado who have come to depend on his programming and experience. Scott created programs and processes that we are still using today at Timber Line.

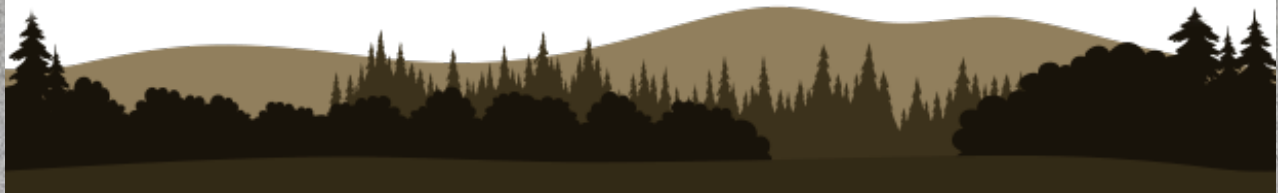

Timber Line will be hosting a small retirement party for Scott in July. We welcome your cards and emailed wishes to be compiled in an album for Scott. Please feel free to send a card to Timber Line Electric and Control Corp., c/o Trish Klingler, P.O. Box 793, Morrison, CO 80465-0793 or email Trish at trish@tlecc.net.

About Us

Timber Line Electric & Control Corporation (TLECC) was established in 1987 by Kurt Evezich and incorporated in April 1988. We provide instrumentation and control field service to over 150 municipal water and sanitation districts in 5 states, serving clients in the skiing, mining, power distribution, oil and gas, and food processing industries. We're also excited about expanding our involvement in clean and renewable technologies and other promising new industries.

Our Mission

To find opportunities to delight our peers and customers by making the complex simple.
